

Asia Beyond Growth

Urbanization in the World's Fastest-changing Continent

ARCHITECTURE PRACTICE SERIES

Edited by EDAW

Essays by EDAW, Cobe Architects, Philip Schmunk, Sze Hon, N. Matsuda, Denise Scott Brown, Christina Crane

As home to the most populated cities on the planet, Asia is an emerging world unto itself. EDAW's *Asia Beyond Growth* is a vivid visual and analytical exploration of the context that will have the most significant impact on the world's built, natural and social environments. That context? An arc that spans from Shanghai to Dubai and which defines the area that is experiencing history's most dramatic physical transformation. With sections devoted to such topics as "Vertical Growth" and "Infravestment," *Asia Beyond Growth* is more than a mere chronicle of urban development. This volume is, rather, a complete text on how to adapt environments to the pace of population growth.

Edited by the global design and planning firm, EDAW, *Asia Beyond Growth* is an incisive and educational documentation of this emerging environment's urban moment.
